9 Best UI Skills for Claude Code

Skill Cards: What It Does, Key Commands, Install, GitHub

1. frontend-design (by Anthropic)

What it does

Makes Claude commit to a clear aesthetic direction (editorial, brutalist, luxury, playful and so on) before writing any code. Pushes for distinctive typography, a real color story and layouts that avoid the generic centered hero with three cards.

Install

```
/plugin install frontend-design@claude-plugins-official
```

or

```
npx skills add anthropics/skills --skill frontend-design
```

GitHub

github.com/anthropics/skills

2. UI UX Pro Max

What it does

Gives Claude a searchable local library of UI styles, 190+ industry color palettes and 70+ font pairings. Its reasoning engine turns a product description into a full design system (style, palette, fonts, spacing, what to avoid) before building. Supports 20+ stacks.

Install

```
/plugin marketplace add nextlevelbuilder/ui-ux-pro-max-skill
/plugin install ui-ux-pro-max@ui-ux-pro-max-skill
```

or

```
npm install -g ui-ux-pro-max-cli
uipro init --ai claude
```

GitHub

github.com/nextlevelbuilder/ui-ux-pro-max-skill

3. Taste Skill

What it does

A pack of skills with concrete, metric-driven rules for layout, typography, motion and spacing. Includes style variants (minimalist-ui, industrial-brutalist-ui, high-end-visual-design) and redesign-existing-projects, which audits and fixes an existing codebase.

Install

```
npx skills add https://github.com/Leonxlnx/taste-skill --skill "design-taste-frontend"
```

Remove the --skill flag to install the full pack.

GitHub

github.com/Leonxlnx/taste-skill

4. Impeccable (by Paul Bakaus)

What it does

A full design toolkit inside Claude Code: one skill plus 20+ commands under /impeccable. Breaks design work into repeatable steps, such as critique first and then polish, like working with a designer who follows a checklist.

Key commands

`/impeccable init`	Set up the project's design direction
`/impeccable audit`	Technical quality checks
`/impeccable critique`	Full UX review
`/impeccable polish`	Final refinement pass
`/impeccable typeset`	Focused typography pass
`/impeccable colorize`	Focused color pass
`/impeccable animate`	Focused motion pass
`/impeccable live`	Iterate visually in the browser

Install

```
/plugin marketplace add pbakaus/impeccable
```

Then open /plugin and install Impeccable.

GitHub

github.com/pbakaus/impeccable

5. Emil Kowalski's Skills

What it does

Motion and interaction polish from the design engineer behind Sonner and Vaul. Teaches Claude the right easing, duration and animatable properties so dropdowns, modals and transitions feel like a real product instead of a static demo.

Key commands

`animate`	Build animations with correct easing, duration and properties
`review-animations`	Audit existing motion against strict rules
`find-animation-opportunities`	Point out where motion would help
`apple-design`	Apple-style design guidance
`mobile-native`	Web-to-app native polish
`prototype`	Build multiple UI versions with a switcher to compare

Install

```
npx skills@latest add emilkowalski/skills
```

GitHub

github.com/emilkowalski/skills

6. Interface Design

What it does

Sets a design direction and saves decisions (button heights, spacing, radius, colors, patterns) to .interface-design/system.md. Claude reads it every session, so new pages stay consistent with earlier ones instead of drifting.

Key commands

`/interface-design:design-review`	Strict craft and hierarchy review
`/interface-design:design-deslop`	Fast cleanup pass on generated UI

Install

```
npx skills add https://github.com/dammyjay93/interface-design --skill interface-design
--agent claude-code -g
```

or

```
/plugin marketplace add Dammyjay93/interface-design
```

GitHub

github.com/Dammyjay93/interface-design

7. shadcn/ui Skill (official)

What it does

Reads your components.json so Claude knows your framework, installed components, icon library and theme. Uses the shadcn CLI correctly for adding components, theming with CSS variables, dark mode, variants and custom registries.

Install

```
npx skills add shadcn/ui
```

or

```
pnpm dlx skills add shadcn/ui
```

GitHub

github.com/shadcn-ui/ui

8. Web Design Guidelines (by Vercel)

What it does

Reviews UI code against 100+ rules from Vercel's interface guidelines: accessibility, focus states, forms, reduced motion, typography details, image dimensions, dark mode, touch and locale formatting. Best used as a pre-ship check.

Install

```
npx skills add https://github.com/vercel-labs/agent-skills --skill web-design-guidelines
```

GitHub

github.com/vercel-labs/agent-skills

9. webapp-testing (by Anthropic)

What it does

Lets Claude use Playwright to open your app, take screenshots, click through flows and read browser logs. Claude can see what it built and fix visual bugs, like an overlapping mobile nav, before you open the browser.

Install

```
/plugin marketplace add anthropics/skills
/plugin install example-skills@anthropic-agent-skills
```

GitHub

github.com/anthropics/skills
